

Dear Faktion team,

The sentence in your vacancy that caught my attention was that you do not stop at prototypes. That is exactly the direction I want for my career. I enjoy exploring AI, but I am most motivated when the result becomes a dependable system with an API, data flow, evaluation, deployment and a clear use for the people working with it.

I recently graduated with distinction in AI Engineering at Howest. During my internship at 2Ai IPCA in Portugal, I built a Python pipeline for echocardiographic DICOM studies. It detects measurement regions, extracts values with computer vision and OCR, and supports resumable batches, validation queues and human review. I also developed an OpenCV and metadata-based source-video matcher and reduced one representative run from roughly 21 hours to 23 minutes. This taught me to combine experimentation with performance, traceability and practical handoff.

Your mix of GenAI, classical ML, computer vision and agentic systems matches my own project work unusually well. For a Financial AI Agent, I owned the FastAPI backend, orchestration, seven typed MCP tools, RAG, PostgreSQL persistence, ChromaDB retrieval, containers and tests. I added citations and confirmation guardrails because I wanted the system to be inspectable rather than merely impressive in a demo. In a separate MLOps project, I worked with Azure ML, MLflow, Docker, Kubernetes and GitHub Actions. I also maintain and contribute to the open-source Athas editor across TypeScript and Rust.

I realise that I am applying at the start of my professional career and that the role asks for substantial hands-on ability. I will not pretend to have years of production experience. What I can bring is a strong public portfolio, fast learning, honest technical judgement and repeated experience of carrying difficult work from an unclear starting point to a tested result.

Faktion feels like a place where my interests in reliable AI and serious software engineering could reinforce each other. I would value the opportunity to show you my work and discuss where I could contribute while continuing to grow.

Kind regards,

Warre Snaet
