

Warre Snaet

Junior Cloud & GenAI Engineer

Vilvoorde, Belgium | +32 474 82 94 93 | warresnaet@icloud.com

snaetwarre.github.io/My-Portfolio | github.com/SnaetWarre | linkedin.com/in/warre-snaet-272354370

PROFESSIONAL SUMMARY

AI Engineering graduate with distinction and hands-on experience building cloud ML workflows, agent infrastructure, retrieval pipelines, and containerized Python services. Built systems with Azure ML, FastAPI, MCP tool calling, RAG, vector search, PostgreSQL, Docker, Kubernetes manifests, MLflow, and GitHub Actions. My cloud experience is Azure-first; the platform engineering fundamentals are transferable to AWS, and I am motivated to deepen that stack in production.

RELEVANT GENAI AND CLOUD PROJECTS

Financial AI Agent | Backend, Agent Infrastructure, and Delivery

github.com/SnaetWarre/Financial_AI_Agent | Two-person academic project | 2026

- Owned backend architecture, agent orchestration, MCP integration, PostgreSQL persistence, containerization, tests, and most frontend integration across a six-service application.
- Built a FastAPI orchestrator with streamed responses, retrieval through ChromaDB, local Ollama inference and embeddings, seven typed MCP tools, citations, and persistent sessions.
- Implemented guardrails and a two-step confirmation flow so LLM-generated instructions cannot silently change the simulated portfolio.
- Packaged the frontend, inference API, MCP server, RAG pipeline, PostgreSQL, and Ollama with Docker Compose, health checks, and persistent volumes.

Azure ML Lifecycle | Individual MLOps Project

github.com/SnaetWarre/mlops-sports-ball-classification | 2026

- Provisioned Azure ML workspace and compute resources and built reusable components for parallel preprocessing, data splitting, cloud training, and model registration.
- Tracked metrics and versioned artifacts with MLflow-compatible tooling and served the resulting model through FastAPI with PostgreSQL prediction history.
- Containerized the application with Docker Compose and authored Kubernetes manifests with secrets, persistent volumes, resource limits, health probes, and multiple API replicas.
- Automated setup, training, model download, deployment, health verification, rollback-friendly image versioning, cleanup, and notifications with GitHub Actions.

Event Chatbot for XPO Group | Backend, Retrieval, and Integration

github.com/SnaetWarre/Industry-Project-Xpo-Group | Academic team project for an external client | 2025

- Built and refined .NET endpoints for embeddings, semantic search, chat, authentication, registration, and analytics using Azure OpenAI and Cosmos DB.
- Worked on Python ingestion for multiple event websites and added retry handling, input sanitization, rate limiting, event-specific prompts, logging, and deployment configuration.

TECHNICAL EXPERIENCE

AI & Software Engineering Intern | 2Ai IPCA | Barcelos, Portugal

February 2026 - June 2026

- Built a resilient Python pipeline that reads echocardiographic DICOM studies, extracts measurements with OCR and image processing, and exports structured research data.
- Designed resumable batch processing, validation queues, review tooling, structured logging, and cross-platform handoff documentation.
- Optimized a source-video matcher with OpenCV ECC alignment and DICOM metadata, reducing one representative run from approximately 21 hours to 23 minutes.

Software Engineer, Paid Client Project | Apolloon | Belgium

2026

- Built a local-first race operations platform with React, TypeScript, Express, Electron, SQLite, tRPC, and Socket.IO.
- Implemented realtime synchronization, LAN discovery, replicated hot-standby behavior, health visibility, and safe failover rules for unreliable event conditions.

EDUCATION

Professional Bachelor in Multimedia & Creative Technologies | AI Engineering track

Howest University of Applied Sciences | September 2023 - June 2026 | Graduated with distinction

MLOps: 18/20. Relevant coursework included Azure ML pipelines, cloud infrastructure, MLflow, Docker, Kubernetes, CI/CD, generative AI, backend engineering, data engineering, and model evaluation.

TECHNICAL SKILLS

Agentic AI and retrieval: MCP, LLM tool calling, RAG, embeddings, vector search, ChromaDB, Ollama, guardrails, prompt design

Cloud and platform: Azure ML, MLflow, Docker, Kubernetes, GitHub Actions, CI/CD, Linux, health checks, versioned artifacts

Backend and data: Python, FastAPI, PostgreSQL, SQL, REST APIs, server-sent events, testing, logging, C#/.NET

Additional: Azure OpenAI, Cosmos DB, React, TypeScript, Git, OpenCV, Rust

ADDITIONAL INFORMATION

Languages: Dutch (native), English (C1), French (B1-B2)

Other: Driving licence B; open-source maintainer and contributor to the Athas code editor.
