**Profile**

Joining Captic as a physical AI engineer in November 2026. AI Engineering graduate with distinction. I build Python backends, agent infrastructure, applied AI systems, and data pipelines, and I have taken unfamiliar problems from raw data to validated software, including cloud ML workflows, APIs, and deployable applications.

## Technical experience

**Physical AI Engineer** — From Nov 2026
Captic · Ghent, Belgium

- Startup that makes AI vision kits for factory robots. The software finds the next bag or box on a pallet and sends the robot a pick pose.

**AI & Software Engineering Intern** — Feb–Jun 2026
2Ai IPCA · Barcelos, Portugal

- Built a Python pipeline that reads echocardiographic DICOM studies, detects burned-in measurement regions, extracts values with OCR and image processing, and exports structured JSON.
- Designed resumable batch processing, validation queues, review tooling, ECG trace extraction, and cross-platform handoff documentation.
- Built a source-video matcher that searches same-exam videos for the frame each measurement came from, and ported OpenCV's ECC alignment to batched PyTorch on CUDA. With faster frame preparation, matching ran 14.9× faster (1182 s to 80 s on a 39-image benchmark).

**Software Engineer · Paid Client Project** — 2025-2026
Apolloon 24-Hour Run System · Belgium

- As the sole developer, built a local-first race operations platform with React, TypeScript, Express, Electron, SQLite, and tRPC.
- Replicated the race across three laptops with Raft: majority-vote leader election, automatic failover, UDP discovery on the LAN, and browser screens that move to a live laptop. Tested it with a Raft simulation and failure drills on the event hardware.

## Selected projects

**Offline Semi-Supervised AI in Rust**
Built an end-to-end Burn/Rust plant-disease classifier trained with 20% labeled data. Pseudo-labeling raised held-out top-1 accuracy from 86.06% to 94.90%. The weights are about 916 KB, the offline release binary about 26 MB, and inference takes about 80 ms on an iPhone 12.

**Financial AI Agent**
In a two-person academic project, owned backend architecture, orchestration, MCP integration, persistence, containers, tests, and most frontend integration across a six-container application.

**Athas Code Editor · Open-Source Contributor**
Nine merged pull requests across React/TypeScript and Tauri/Rust: large-file streaming, input hardening, C# support, image diffing, Linux UI, proxy handling, resource and memory leaks, and an LSP race-condition fix.

## Education

**Professional Bachelor in Multimedia & Creative Technologies**
AI Engineering track · Howest

Sep 2023–Jun 2026

**Graduated with distinction**

MLOps 18/20 · Azure ML pipelines, Docker, Kubernetes & CI/CD

## Skills

Primary
Python · FastAPI · OpenCV · SQL/PostgreSQL · Git · Linux

AI & data
Computer vision · OCR · RAG · MCP · Model evaluation · NumPy · pandas

Cloud & platform
Azure ML · Docker · GitHub Actions · REST APIs · Testing

Additional
C#/.NET · TypeScript/React · Rust/Burn · Tauri

## Languages

Dutch (native) · English (C1) · French (B1–B2)

## Additional

Driving licence B
Hospitality work since 2021 in fast-paced customer-facing teams
