

Warre Snaet

Junior Cloud & GenAI Engineer

Vilvoorde, Belgium | +32 474 82 94 93 | warresnaet@icloud.com

snaetwarre.github.io/My-Portfolio | github.com/SnaetWarre | linkedin.com/in/warre-snaet-272354370

PROFESSIONAL SUMMARY

AI Engineering graduate with distinction and hands-on project experience in AWS and Azure, infrastructure as code, agent infrastructure, retrieval pipelines, and containerized Python services. Built systems with Terraform, ECS Fargate, IAM, Vault, Azure ML, FastAPI, MCP tool calling, RAG, Docker, Kubernetes manifests, MLflow, and GitHub Actions. Looking to grow these cloud and GenAI platform skills in a production engineering team.

RELEVANT GENAI AND CLOUD PROJECTS

AWS Fargate Infrastructure with Vault Workload Identity | Individual Project

github.com/SnaetWarre/aws-fargate-vault-terraform | Individual project | 2026

- Designed reusable Terraform modules for a two-availability-zone VPC, public load balancer subnets, private Fargate tasks, routing, IAM roles, and application autoscaling.
- Implemented Vault AWS authentication using the ECS task role, a least-privilege Vault policy, and an Agent sidecar that renders runtime content into an ephemeral shared volume without a static Vault token.
- Added CloudWatch logging and Container Insights, container and ALB health checks, deployment circuit-breaker rollback, optional ACM TLS, and Fargate Spot capacity for cost awareness.
- Created a non-deploying GitHub Actions quality gate and credential-free Terraform tests for AWS-only, Vault-enabled, and HTTPS plans. Locally verified with Terraform 1.15.8: three tests passed.

Financial AI Agent | Backend, Agent Infrastructure, and Delivery

github.com/SnaetWarre/Financial_AI_Agent | Two-person academic project | 2026

- Owned backend architecture, agent orchestration, MCP integration, PostgreSQL persistence, containerization, tests, and most frontend integration across a six-service application.
- Built a FastAPI orchestrator with streamed responses, retrieval through ChromaDB, local Ollama inference and embeddings, seven typed MCP tools, citations, and persistent sessions.
- Implemented guardrails and a two-step confirmation flow, then packaged the services with Docker Compose, health checks, and persistent volumes.

Azure ML Lifecycle | Individual MLOps Project

github.com/SnaetWarre/mlops-sports-ball-classification | 2026

- Provisioned Azure ML workspace and compute resources and built reusable components for parallel preprocessing, data splitting, cloud training, and model registration.
- Containerized the application with Docker Compose and authored Kubernetes manifests with secrets, persistent volumes, resource limits, health probes, and multiple API replicas.
- Automated setup, training, model download, deployment, health verification, rollback-friendly image versioning, cleanup, and notifications with GitHub Actions.

TECHNICAL EXPERIENCE

AI & Software Engineering Intern | 2Ai IPCA | Barcelos, Portugal

February 2026 - June 2026

- Built a resilient Python pipeline that reads echocardiographic DICOM studies, extracts measurements with OCR and image processing, and exports structured research data.
- Designed resumable batch processing, validation queues, review tooling, structured logging, and cross-platform handoff documentation.
- Optimized a source-video matcher with OpenCV ECC alignment and DICOM metadata, reducing one representative run from approximately 21 hours to 23 minutes.

Software Engineer, Paid Client Project | Apolloon | Belgium

2026

- Built a local-first race operations platform with React, TypeScript, Express, Electron, SQLite, tRPC, and Socket.IO.
- Implemented realtime synchronization, LAN discovery, replicated hot-standby behavior, health visibility, and safe failover rules for unreliable event conditions.

EDUCATION

Professional Bachelor in Multimedia & Creative Technologies | AI Engineering track

Howest University of Applied Sciences | September 2023 - June 2026 | Graduated with distinction

MLOps: 18/20. Relevant coursework included Azure ML pipelines, cloud infrastructure, MLflow, Docker, Kubernetes, CI/CD, generative AI, backend engineering, data engineering, and model evaluation.

TECHNICAL SKILLS

Agentic AI and retrieval: MCP, LLM tool calling, RAG, embeddings, vector search, ChromaDB, Ollama, guardrails, prompt design

Cloud and platform: AWS ECS Fargate, VPC, ALB, IAM, CloudWatch, Terraform, Vault, Azure ML, MLflow, Docker, Kubernetes, GitHub Actions, CI/CD, Linux

Backend and data: Python, FastAPI, PostgreSQL, SQL, REST APIs, server-sent events, testing, logging, C#/.NET

Additional: Azure OpenAI, Cosmos DB, React, TypeScript, Git, OpenCV, Rust

ADDITIONAL INFORMATION

Languages: Dutch (native), English (C1), French (B1-B2)

Other: Driving licence B; open-source maintainer and contributor to the Athas code editor.
